EXPREMENT -2

NAME: SABITHA.R ROLL NO:240701448

Design a UI where users recall visual elements (e.g., icons or text chunks). Evaluate the effect of chunking on user memory.

FRAME 1:

INSTRUCTION PAGE:

Chunking Analysis of the Instruction Page

Chunking is a cognitive strategy that organizes information into smaller, meaningful units to improve understanding and memory retention. The instruction page in this video-based memory recall task applies chunking effectively as follows:

1. **Clear and Sequential Instructions**

- Instructions are presented in **numbered steps**, making them easy to follow.
- Each step explains a single action, reducing cognitive overload.

2. Logical Grouping of Information

• **Observation Phase** (Steps 1-2) → Users learn about what they will see.

• **Memorization Strategy** (Step 3) → Encourages users to focus on remembering items.

• **Recall Phase** (Steps 4-5) → Explains how users will recall information.

• **Key Performance Metric** (Step 6) → Highlights that accuracy matters more than speed.

3. Visual Hierarchy and Design

- A bold title clearly communicates the task purpose.
- Minimal text with icons improves readability.
- A highlighted **NEXT** button clearly indicates the next action.

4. Time Awareness

- Instructions mention the duration, preparing users to stay focused while watching.

5. Simplicity and Clarity

- Short, direct sentences are used.
- The layout avoids clutter, helping users understand the task quickly.

FIND FISH

INSTRUCTION

1. Carefully observe all fhe fishes shown on the screen
2. Try to remember the different fishes and there appeareance
3. After observing,select the fishes you remeber seeing
4. Click the **submit** button to continue
5. Click the Answer button to view your result

CHUNKING PHASE:

Analysis of the Memory Recall Task - Chunking Phase Screen This screen represents the Chunking Phase of a Memory Recall Task, where users observe and memorize different icons within a limited time. Below is a breakdown of its key components:

1. Purpose of the Screen

- Users watch a video containing multiple visual elements such as objects, actions, or scenes.
- The goal is to remember these elements by forming visual chunks.

2. Key Elements and UI Components

⏳ Countdown Timer

- Displays the remaining video time.
- Creates urgency and maintains user focus.

▶ Embedded Video Player

- The video presents information in a continuous flow.
- Visual scenes act as natural chunks, making memory formation easier.

📊 **Progress Indicator**

- Shows how much of the video has played.
- Helps users mentally segment the video into parts.

3. How Video Chunking Works

1. Users watch the video attentively.
2. They divide the video into meaningful segments (scenes, actions, objects).
3. These segments are stored as memory chunks.

4. Cognitive and UX Benefits

- Videos combine motion, color, and context, enhancing memory retention.
- Chunking video scenes reduces mental effort.
- Improves short-term visual memory.

FRAME 3:

RECALL PHASE

Analysis of the Video Recall Phase Screen

This screen represents the Selection Phase of a Memory Recall Task, where users recall and choose the items they remember from the previous Chunking Phase. Below is a breakdown of its components:

1. Purpose of the Screen

- Tests users' ability to recall visual elements seen in the video.
- Measures effectiveness of video-based chunking.

2. Key UI Components

📝 **Instruction Text**

- Clearly asks users to select or answer based on the video.

🖼 / ❓ **Recall Options**

- Options include images, keywords, or multiple-choice questions related to the video content.
- Some options act as distractors to test memory accuracy.

🔘 **Selection Controls**

- Radio buttons or checkboxes allow easy interaction.

▯ **SUBMIT Button**

- Confirms the user's responses.

3. How the Recall Phase Works

- Users recall video scenes and elements.
- They select correct answers based on memory.
- Distractors test false recall.

4. Cognitive and UX Benefits

- Evaluates memory recall from dynamic content.
- Tests attention and comprehension.
- Interactive design improves engagement.

FIND FISH
Select the fishes you remember
SUBMIT

FRAME 4:
RESULT PAGE

Analysis of the Score & Feedback Screen

This screen represents the Score & Feedback Phase of the Memory Recall Task, where users receive their performance evaluation based on the selections made in the previous Recall Phase.

1. Purpose of the Screen

- Displays recall accuracy.
- Helps users understand their memory performance.

2. Key Elements and UI Components

📊 Score Display

- Shows correct answers out of total questions.
- Simple visual representation improves clarity.

◉ Action Buttons

- **RESTART** – Rewatch the video and retry.
- **CONTINUE** – Proceed to the next task.
- **EXIT** – End the experiment.

3. How This Phase Works

1. The system evaluates user responses.
2. A score is calculated and displayed.
3. Users choose their next action.

4. Cognitive & UX Benefits

- Immediate feedback reinforces learning.
- User control increases motivation.
- Video-based recall feels engaging and less monotonous.
